

Sabrina's Frog Friendly Garden

Step 1. Lay pond liner with Fibreglass pond

Step 2. Place logs and rocks out prior to landscaping

Step 3. Position logs and rocks partially buried into the ground

Step 4. You need to get down and dirty with your logs and rocks

Step 5. Bringing it together, will mean their will some alterations.

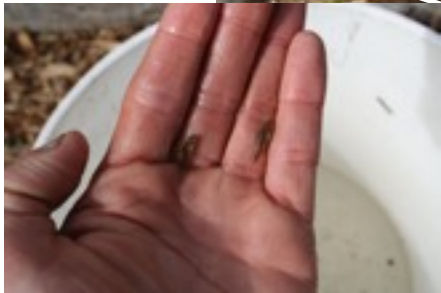

Step 6. Incorporating a viewing spot makes it sacred. Now where's that cuppa!

Bringing it together: Making biodiversity happen in your garden

The ground frogs have metamorphasized and utilizing the bog area as expected. Being a small frog (2.5cm) it will seek refuge in the boggy area (amongst plants & logs) during the summer and come Winter breed in the flooded areas.

Dragon Flies have started to colonise the pond area. This one is metamorphasizing from a larvae to an adult. They eat flies and other flying insects.

Baby native Pygmy Perch were placed in the pond to eat Mosquito and Midge larvae

Date: 31 October 2008

The bog plants are starting to come into their own. Here the Purple flowers of the *Dampier trigona* contrast well with the yellow flowering *Goodenia filiformis*.
